

HIGH-PRECISION LOW VOLTAGE DETECTOR

A4806

Description

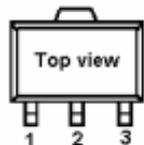

The A4806 is a series of high precision voltage detector with ultra low current consumption (500nA typ. at $V_{DD}=3.0V$). It can work at very low voltage, which makes it perfect for system reset.

The A4806 is composed of high precision voltage reference, comparator, output driver and resistor array. Internally preset detect voltage has a low temperature drift and requires no external trimming.

Two type of output, CMOS and N-Channel Open- Drain are available.

A4806 is available in SOT-89-3, SOT-23, TO-92 & SOT-25 package.

Pin Description
